

CCF Gates/Locks

- Clay County Flyers is collocated with the Doctors Inlet Environmental Convenience Center (ECC) at 288 Sleepy Hollow Rd, Middleburg Florida.
- The outer gate will be open Monday through Saturday during normal business hours to allow access to the Clay County Utilities buildings just north of the site.
- The inner gate will only be open while the ECC is open for business, Thursday, Friday and Saturday, 0730-1730.
- CCF Members in good standing who are solo qualified are permitted access to the site at any time, subject to the following requirements of our License Agreement with Clay County.
 - Under no circumstances will non-member guests of CCF be allowed to remain at the Flying Area without a member present. If invited or uninvited flyers or visitors refuse to leave the site, the Clay County Sheriff's Office will be notified to escort visitors or guests from the site.
 - CCF is responsible for security at the Flying Area when the Convenience Center is closed to the public. The entry gate shall be locked after a member enters the site and locked when the member leaves the site. The entry gate shall never be left open by the member at any time during hours that the Doctors Inlet ECC is closed.
 - No CCF member or invited guest may use the Flying Area to dispose of solid waste or other refuse when the Doctors Inlet ECC is closed or when it's open if member does not live in Clay County. This includes any solid waste or other refuse generated at the site.
- Both gates are secured via chain with a separate lock for each organization that has access to the site. The CCF locks are bronze combination locks. When locking the gate, it is imperative that the locks are arranged so that any one of the locks will unlock the gates, and that the locks can be accessed from either side.

- This is a picture of the inner gate properly locked.
 - The left most lock is for Clay County Utilities, the center is for County Waste personnel, and the bronze on the right is for CCF members.
 - Note that the full length of the chain is used and that opening any one lock will allow the gate to be opened.

- This is a picture of the inner gate improperly locked. In this case the chain was shortened by whoever locked the of the waste dept lock. As such, our lock does not open the gate. This most often occurs Mon-Wed when the truck drivers are accessing the site to remove the trash containers. The drivers are employees of a sub-contractor and have high turnover. If you find yourself locked out, please contact a club officer immediately.
